

Malcome Fein

New York, NY | 917-697-1900 | mfeindev@gmail.com | linkedin.com/in/malcome-fein | github.com/mfeinLearn

TECHNICAL SKILLS

Languages: Go, Python, JavaScript, SQL (PostgreSQL/MySQL), C#, Java, Ruby, HTML/CSS

Data Science & ML: pandas, NumPy, scikit-learn, PySpark, Tableau, statsmodels; decision trees, logistic regression, clustering, PCA, NLP, time series, LLMs

Frameworks & Cloud: React/Next.js, Flask, .NET, Node.js, MongoDB/Cosmos DB, Docker, Kubernetes (AKS), GitHub Actions

EXPERIENCE

Software Engineer | Agreeable Data

Jun. 2026 – Present

- Designed a deterministic Go simulation engine that scores LLM agents on one seeded world (~50-step horizon, identical rules and task board) with no model code in the engine; correctness is locked down by scripted bots.
- Shipped a 3-call world API (observe, legalActions, apply) so the eval harness and engine can develop in parallel; v1 includes a lifespan ledger, seeded task board, deterministic combat resolver, and delivery task.
- Used Claude to run and inspect agent traces on the seeded world and to iterate on eval tasks (Claude Certified Architect – Foundations).

Full-Stack Software Engineer | Study Together

Mar. 2025 – Present

- Raised camera/screen-share protocol adherence 25% for 1,000+ concurrent voice-channel users by replacing noisy Discord polling with set-based status deduplication, cutting API calls 15%.
- Shipped a Node.js, Knex, and MySQL service that tracked session goals for 500+ users and 1,000+ sessions, cutting staff configuration 30% and lifting engagement 20%.

AI Engineering Apprentice | Flatiron School | Organ IQ

Jan. 2026 – Jun. 2026

- Co-built a real-time multiplayer web port of the React! organic-chemistry card game (Next.js, TypeScript, Prisma, Clerk) with an AI tutor for molecule building and reaction chains.
- Labs in Python (pandas, scikit-learn, PySpark): classification, clustering/PCA, and experimental design.

Software Engineer Instructor | Flatiron School

Jan. 2020 – Jul. 2023

- Led 30+ daily pair-programming and live debugging sessions in JavaScript, Python, and Ruby/Rails; cleared 85% of student blockers in-session and cut time-to-green-tests 40%.
- Reviewed student code and deployment pipelines (PostgreSQL/MySQL/MongoDB, Heroku/Render), raising first-pass merge readiness 30% and cutting repeat deploy failures 25%.

Software Engineer | Omnipotence, LLC | Sage / Project Gem

Aug. 2015 – Apr. 2017

- Built a 2D educational game (Java, OpenGL, LibGDX) for literacy and math; texture atlases improved render performance 25% and cut load time 1.5s. Led Android OS R&D (custom AOSP images, Pixel-C flashing).

PROJECTS

LeetCode Coding Buddy Bot | Python

Apr. 2026

- Built a GitHub-connected coach used on 200+ LeetCode problems: analyzes pushes with an LLM, logs mistake patterns, and emails a weekly plan (weak topics, next problems, Anki-style focus).
- Automated the loop with GitHub Actions/cron: ingest push → analyze → update progress/goals store → Sunday summary. Added focus-mode lock so the bot stays on one topic for a set window.

Game Economy Microservice Platform | C# / .NET

Jul. 2025

- Split a game economy into Inventory, Catalog, and Trading .NET microservices on MongoDB/Cosmos DB with MassTransit/RabbitMQ; deployed on AKS with Docker and GitHub Actions CI/CD.
- Hardened service APIs with OpenID/Duende auth, Polly resilience, an Emissary-Ingress gateway, and OpenTelemetry/Jaeger/Prometheus/Grafana observability.

EDUCATION

Flatiron School | AI / Data Science Apprenticeship

Jan. 2026 – Jun. 2026

Flatiron School | Software Engineering Immersive

Aug. 2018 – Dec. 2019

Hofstra University | Computer Science

Sep. 2013 – May 2015

SUNY Canton | Associate of Science, Engineering Science

Sep. 2011 – May 2013
